

Six Degrees and Whistlebrook

Working in partnership to deliver Whistlebrook applications as a fully-managed service

For more information on Six Degrees' secure cloud services, visit 6dg.co.uk/cloud

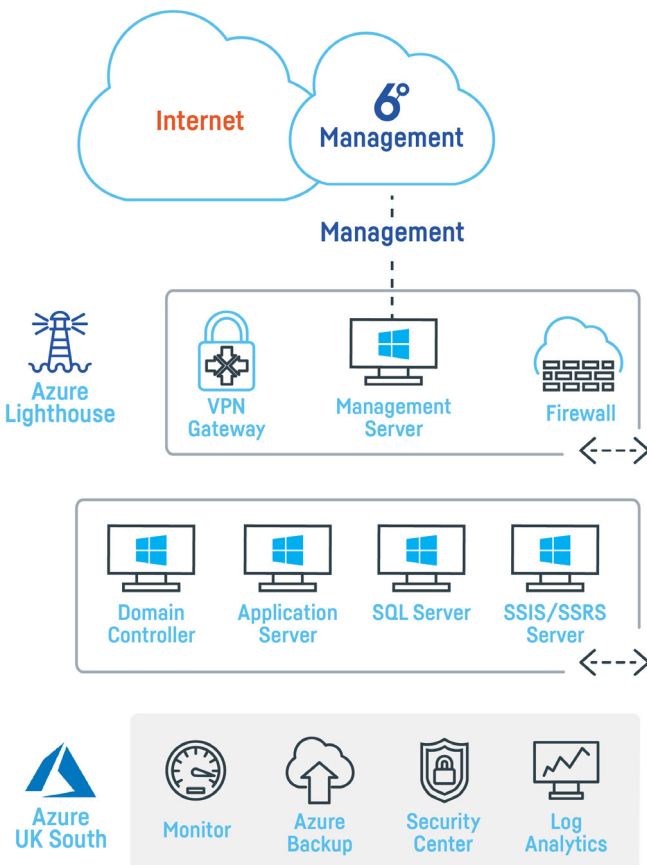

Six Degrees is Whistlebrook's chosen managed service and hosting partner. Its industry-leading secure cloud services enable you to deploy Whistlebrook's products in both infrastructure and platform as a service models.

Maximise security, performance, uptime and availability whilst relieving management burden. Consume Whistlebrook applications in the right as a service model for you, delivered in collaboration with Six Degrees.

Target Architectures

Six Degrees works closely with Whistlebrook to design target architectures that deliver excellent end user experiences. The following example target architecture for the Whistlebrook WIRES® application is based on a single Azure subscription utilising Azure Infrastructure as a Service (IaaS) and Platform as a Service (PaaS). This same architecture could also be utilised for other Whistlebrook products.

Azure Virtual Machines. Windows virtual machines to support the application environment (domain controller, WIRES® application server, database server and SSIS/SSRS server).

Azure Firewall to protect the Azure environment.

VPN Gateway. Site-to-site connectivity to your environment.

Azure Backup. Backup of the hosted virtual machines, with 30 daily restore points.

Security Center. Threat protection, security monitoring and hygiene reporting, regulatory compliance and security best practices.

Azure Monitor. Proactive monitoring and alerting of Azure resources, ensuring service uptime and reactive fault remediation.

Azure Log Analytics. Performance and error monitoring/alerting and in-depth troubleshooting capabilities.

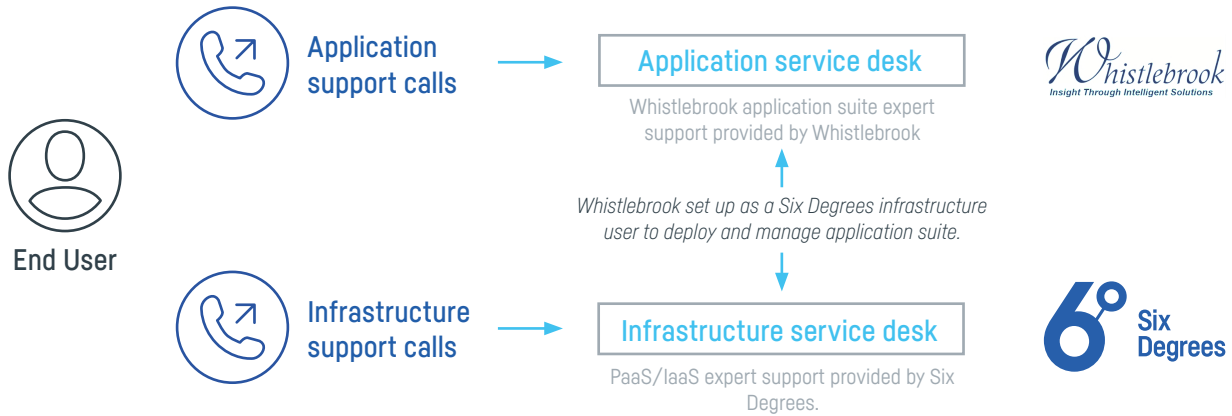

Azure Lighthouse. Providing service providers with a control plane to view and manage Azure subscriptions with higher automation and scalability, and enhanced governance.

**Please note that end user connectivity and high availability are excluded in the base design, and will be designed per customer requirements.*

Shared Service Model

The following example shared service model demonstrates how Whistlebrook applications can be consumed as a service by your organisation:

Whistlebrook as a Service model

Six Degrees delivers the infrastructure onto which Whistlebrook deploys its application suite. With two expert service desks on hand for your IT team to raise any changes or queries regarding the application or infrastructure, you can be assured that your staff will be provided with the best end user experience.

Depending on how mission-critical the Whistlebrook application suite is to your business, and what compliance standards you have to meet, your infrastructure can be tailored to meet your unique needs through:

- Industry-leading availability SLAs
- Custom retention policies on backup services
- Bespoke security shared responsibility model
- 24x7 service desk for platform issues
- Geographically redundant deployments available
